Bauer Gear Motor supplies modern drive solutions for all industry sectors in which material must be moved. The customer benefit lies in the robustness and durability of our products. The simple and cost effective installation, the minor service necessity and the high efficiency reduce the costs throughout the whole life of the drive. The Bauer-Service is at your disposal world-wide.

Bauer geared motors make drive solutions possible in the power range 0.03 to 75 kW.

Proximity to the customer, both geographically and psychologically, is an important pre-condition for good cooperation. Our highly qualified advisors, technicians and fitters are working for you round the world. They speak your language – even in the transmitted sense.

Helical Geared Motor Series BG

Three phase helical geared motors for driving machines and equipment of all types
- State-of-the-art gearbox housing designed for operation under harsh conditions.
- Compact closed housing is ideal for preventing lubricant loss and dirt build-up.
- High tensile cast housing.
- Vibration-free housings, noise absorbent and resistant against chemical effects.
- The housing is machined in a single clamping process.

- Series BG as standard in 2-stage design, as from BG100 3-stage.
- Generously dimensioned working shaft and bearings.
- Higher ratios available through attachment of a purpose built pre-stage or pre-connected gearbox.
- Universal housing with completely new, low height installation possibilities.

- Aluminium die cast cage rotor ensures a high reliability at high starting torques and low starting currents.
- Pull-up torques are mostly avoided.

- The stator winding is manufactured from high quality enamelled copper wire with state-of-the-art three layer insulation in the groove and winding head.
- The stator winding is impregnated with a damp-proof and drip-free resin.
- The electrical design of the motor is adapted to the gearbox.

- Stator housings with jacket and cooling fins are manufactured in one casting and ensure efficient heat dissipation.
- Motor housings, bearing covers and terminal boxes made of corrosion resistant aluminium die casting.
- Stator housings also available in cast iron.
- Spacious terminal box also completely sealed against dust and water spray.
- A large measure on safety through sturdy cable lugs on the winding ends.
- Handy terminals allow easy connection.

- Gear wheels made of high tensile and case hardened steel.
- Highly wear resistant through flank hardness of 60-62 HRC.
- Impervious to shock.
- Tooth flanks shaved, hobbed or ground.
- Strong, non-flexible pinion shafts and bearings guarantee an exact tooth meshing.
